Maximum Marks	3

Coding & Solution

Development Approach

The project was developed iteratively using Agile methodologies. The backend RESTful API was built first using Node.js, Express, and MongoDB. Secure authentication was implemented via JWT. Following the backend, the React frontend was developed, ensuring components were modular and reusable. Redux/Context API was used for state management, while Axios was utilized to connect the UI to the backend endpoints.

Key Modules Developed

S.No	Module	Description	Developer
1	User Auth Module	Registration, Login, JWT tokens	Sai Surya Lakshmi
2	Stock Listing Module	Fetch, display, search stocks	Gedela Chakradhar
3	Trading Engine	Buy/sell logic with virtual funds	Tanuku Prasad
4	Portfolio Manager	Track holdings, P&L, balance	Anudeep Gudala
5	Watchlist Module	Add/remove favorite stocks	Radhika Devi
6	Admin Panel	Stock CRUD, user management	Sai Surya Lakshmi
